Alternative construction for draught-proof enclosure	<ul style="list-style-type: none"> <li>- Draught-proof enclosure</li> <li>- Alternative construction</li> <li>- Annex D</li> </ul>	CTL-ETF5 - OSM/LUM	2022 CTL Plenary Meeting
<b>Question</b>			
<p>What is the requirement for an alternative construction instead of using the draught proof enclosure according to Annex D?</p>			
<b>Decision</b>			
<p>The construction needs to provide the same draught protection as the draught proof enclosure according to Annex D.                      A construction or room with a draught of &lt; 0,2m/s deem to meet this requirement.                      (see also 34D/1547/DC)</p>			
<b>Explanatory notes</b>			
<p>The value 0,2 m/s has been taken from the standard IEC 60068-2-2:2007 Environmental testing – Part 2-2: Test-Test B: Dry heat (clause 4.2).</p>
